

HARSHVARDHAN KONDA

AWS Data Engineer | Python | Generative AI | PySpark | SQL

+91-9527728149 | harshkonda2002@gmail.com | LinkedIn

Pune, Maharashtra, India

Professional Summary

Software Engineer with 2 years of experience building scalable ETL pipelines, cloud-based data solutions, and automation workflows using Python, SQL, PySpark, and AWS services. Experienced in AWS Glue, S3, Redshift, Athena, Lambda, and distributed data processing frameworks. Familiar with Generative AI concepts, prompt engineering, and LLM fundamentals applied to AI workflows. Strong understanding of data engineering, automation scripting, DevOps fundamentals, and scalable application development.

Technical Skills

Programming Languages: Python, SQL, PySpark

Data Engineering: ETL, ELT, Data Pipelines, Data Ingestion, Data Processing, Data Validation, Data Quality, Batch Processing, Incremental Processing

Cloud Platforms (AWS): AWS Glue, S3, Redshift, Athena, Lambda, EMR, EC2, IAM, RDS, CloudWatch

Big Data & Databases: Apache Spark, Redshift, Snowflake, Parquet

Generative AI & AI Tools: Prompt Engineering, LLM Fundamentals, Generative AI Basics, Hugging Face, OpenAI APIs, Claude Code, GitHub Copilot

DevOps & Tools: Git, Airflow, dbt, Docker, CI/CD Fundamentals, Linux Basics

Other Skills: Automation Scripting, API Integration, Debugging, Monitoring, Version Control

Experience

Anura Infotech Pvt. Ltd (CRIF India)

Software Engineer

Aug 2024 – Present

Pune, Maharashtra, India

- Designed and maintained scalable **AWS-based data pipelines** using **Python, PySpark, AWS Glue, S3, Athena, Redshift, and SQL** to support analytics and reporting use cases.
- Built **ETL and ELT workflows** to ingest, parse, standardize, and load structured and semi-structured data from multiple source systems and file formats.
- Developed Python-based automation scripts for **data validation, monitoring, and workflow optimization**, reducing manual intervention in pipeline operations.
- Optimized SQL queries and PySpark transformations to improve performance, scalability, and reliability of pipelines.
- Implemented **batch-driven workflows** with batch ID generation, lifecycle tracking, and end-to-end monitoring for data traceability.
- Performed data parsing, cleansing, standardization, enrichment, and validation to produce analytics-ready datasets.
- Implemented **incremental processing logic** using Insert, Update, and Variation strategies to support historical and delta-based data updates.
- Developed **data quality checks and reconciliation logic**, achieving over **98% accuracy** in accepted versus rejected records.
- Collaborated with cross-functional engineering teams to troubleshoot pipeline failures, debug issues, and improve system reliability and operational stability.
- Built reusable and modular data processing components following coding best practices and Git-based version control workflows.

CRIF Solutions Pvt. Ltd

Data Engineer Intern

Feb 2024 – Aug 2024

Pune, Maharashtra, India

- Supported data ingestion, transformation, and processing tasks using Python and SQL across analytics workflows.
- Performed data cleansing and issue resolution to maintain data accuracy for downstream reporting datasets.
- Assisted in building and maintaining data workflows, automation scripts, and validation checks.
- Worked closely with engineering teams to ensure data accuracy, pipeline stability, and operational efficiency.
- Supported ETL workflow execution and monitored batch processing jobs for smooth data pipeline operations.
- Assisted in SQL query optimization and data validation activities to improve reporting accuracy and processing efficiency.

Projects

Serverless ETL Pipeline Using AWS Glue, S3, and Athena

- **Tech Stack:** AWS Glue, Amazon S3, Athena, PySpark, SQL, Parquet, AWS Glue Crawlers
- Built a serverless ETL pipeline to ingest structured and semi-structured data into Amazon S3.
- Implemented PySpark-based transformations and stored optimized datasets in Parquet format.
- Configured AWS Glue Crawlers for automated schema discovery and metadata management.
- Developed reusable Python and PySpark transformation modules for scalable processing workflows.
- Enabled serverless querying of processed data using Amazon Athena with SQL.
- Ensured scalability, automation, and cost efficiency by leveraging a fully serverless architecture.

Customer and Marketing Analytics Platform

- **Tech Stack:** AWS Glue, PySpark, AWS Lambda, Apache Airflow, Amazon S3, Amazon Redshift, EMR, SQL
- Developed end-to-end ETL pipelines using AWS Glue, PySpark, Lambda, and Airflow.
- Designed data lake and lakehouse architecture using Amazon S3, Redshift, and EMR.
- Built analytical data models to support customer behavior and marketing insights.
- Implemented data quality checks, IAM-based security controls, and access management.
- Monitored and optimized data pipelines for performance, reliability, and cost efficiency.

AI Resume Assistant using Python and OpenAI APIs

- **Tech Stack:** Python, OpenAI API, Prompt Engineering, Streamlit, Pandas
- Built a GenAI-based resume assistant capable of generating resume summaries and job-specific skill recommendations using LLMs.
- Applied prompt engineering techniques to customize AI outputs based on job descriptions and candidate profiles.
- Developed Python scripts for text preprocessing, API integration, and structured output parsing.
- Implemented a lightweight interactive UI using Streamlit for user-friendly interaction with the AI workflow.

Certifications & Achievements

- **AWS Certified Solutions Architect – Associate (SAA-C03)**
- **Data Engineering on AWS – Foundations** – (AWS Training & Certification)
- **AWS Cloud Practitioner Essentials** – (AWS Training & Certification)
- **Google Cloud – Generative AI Fundamentals Skill Badge**

Education

N B Navale Sinhgad College of Engineering
B.Tech : Computer Science And Engineering (CSE)

Sept 2020 - June 2024
CGPA : 9.11
